ABSTRACT

Hostel Room and Mess Allocation System is a software that is helpful for college authorities and students. In the current system, most activities are done manually or through google forms. This can lead to data being misplaced, errors, and inefficiency in the entire process. Our system can be used for proper storage of data and for saving time as well.

This system will record the details of students such as name, roll number, phone number, department, hostel room number, mess name, and other important attributes. It will also contain details of the mess, hostel, hostel manager, room, allotment status, and other necessary information.

Admin will be able to view the entire database whereas students, hostel and mess managers etc will only be able to view the data relevant to them.
